**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 14-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Murphy et al. (3472504) in view of Montguire (3513743).

Murphy et al. disclose a set of folding boards (77'-77"', fig. 1). However, Frick et al. do not disclose a rotatable frame with two or more sets of folding blades for replacing one set with a second set with locking assembly.

However, Montguire et al. teach the use of frame assemblies mount for rotation about an axis to allow an operator to perform maintenance or tool changing (see col. 1, lines 50-62; col. 5, lines 17-24 and 33-35) on one frame assembly while the other frame assembly is being used, thereby, reducing down time. Therefore it would have been obvious to one having ordinary skill in the art at time of invention to have provided Murphy's folding apparatus with a second set of folding assembly (frame assembly, second bar and folding boards) where the first and second frame assemblies are mounted so as to rotate about an axis as taught by Montguire et al. to facilitate tool maintenance or tool changing of one assembly while the other frame assembly is being used to thereby reduce apparatus down time.

Regarding claim 26, Murphy et al. also lack the teaching of locking assembly. However, Montguire et al. teach a locking assembly (pin 142 and recess 144, fig. 4) to align the rotatable member in selected position (see col. 3, lines 72-75; col. 4, lines 1-2). Therefore it would have been obvious to one having ordinary skill in the art at time of invention to have provided Murphy's folding apparatus with a locking assembly as taught by Montguire et al. to align the rotatable member in selected position.

### ***Response to Arguments***

3. Applicant's arguments filed 2/26/2003 have been fully considered but they are not persuasive. Applicant's argument regarding set of folding board is moot in view of the new reference (Murphy et al.). In response to Applicant's argument that there is no suggestion to combine the references, the Examiner recognizes that references cannot be arbitrarily combined and that there must be some reason why the skilled in the art would be motivated to make the proposed combination of primary and secondary references. *In re Nomiya*, 184 USPQ 607 (CCPA 1975). However, there is no requirement that a motivation to make the modification be expressly articulated. The test for combining references is what the combination of disclosure taken, as a whole would suggest to one of ordinary skill in the art. *In re McLaughlin*, 170 USPQ 209 (CCPA 1971). References are evaluated by what they suggest to one versed in the art, rather than by their specific disclosures. *In re Bozek*, 163 USPQ 545 (CCPA 1969).

Regarding claim 33-35, all the rotating structures has horizontal and vertical axis, and further it is a relative term.
